

## MULTI OIL

### Physical properties:

|                          |                 |
|--------------------------|-----------------|
| <b>Color</b>             | Yellow / Orange |
| <b>Appearance</b>        | Liquid          |
| <b>Available volumes</b> | 100ml           |

### Description:

Airlube Multioil is a widely applicable lubricant. The vegetable formula of the Multioil ensures that the product belongs in any garage or kitchen drawer. The oil protects against corrosion, lubricates and loosens what is stuck but should move.

The Airlube Multioil is biodegradable and, like all other products from the Airlube product line, the packaging of Airlube Multioil can be recycled in its entirety.

### Application:

Widely applicable lubricant.

### Instructions:

Assess whether degreasing the product is necessary before use. If the material to be lubricated is very dirty and greased, you must first degrease. To do this, use a degreaser such as the Airlube Super Degreaser. If properly degreased, the item can be lubricated with Multioil. Let the Multioil soak in for a while, then remove the excess Multioil with a dry cloth.
