

CHAIN WAX

Physical properties:

Color	White
Appearance	Liquid
Temperatuurbereik	-5°C / 40°C
Available Volume	100ml / 500ml / 5l

Description:

Airolube Chainwax is a vegetable chain wax developed to optimally protect the bicycle chain.

The Airolube Chainwax is easy to use and keep track of. The wax penetrates deep between the links and provides a water and dirt repellent protective layer. As a result, the chain attracts less dirt and extends the life of the chain. Even in wet and cold conditions, the Airolube Chainwax retains excellent operation.

The Airolube Chainwax, like all other Airolube products, is biodegradable. The packaging is recyclable in its entirety. This makes the Airolube Chainwax sustainable for the bicycle chain and the environment.

Application:

Airolube Chainwax is suitable as a lubricant for chains. Ideal for use in dry weather conditions.

Instructions:

Degrease the chain before using the Chainwax. To do this, use a degreaser such as the Airolube Super Degreaser. Then apply the Chainwax to a dry chain, a drop on each link is sufficient. Let the wax soak in for 15 minutes, then remove the excess Chainwax with a dry cloth. After a long or wet bike ride, remove the chain with a dry cloth. Applying a new layer of chain wax to each link, the bicycle chain is ready for its next ride.
