

CARBON ASSEMBLY PASTE

Physical properties:

Color	Golden brown
Appearance	Paste
NLGI Class	2
Drop point	> 300°C
Available volumes	50ml / 500ml

Description:

Aiolube Carbon Assembly Paste is a mounting paste that helps assemble carbon and aluminum parts. The fine grainy structure of the Carbon Assembly Paste ensures that the parts have to be tightened less and still remain in the right place. This prevents carbon damage and squeaking, cracking and grinding is a thing of the past.

The Aiolube Carbon Assembly Paste is a carbon mounting paste developed from vegetable oil. The paste offers high protection against moisture and corrosion. Like all Aiolube products, the Carbon Assembly Paste is completely biodegradable, the packaging is 100% recyclable. As a result, the Carbon Assembly Paste not only protects the parts, but also protects the environment.

Application:

To be used when mounting carbon on carbon or carbon on aluminium joints.

Instructions:

Make sure the surface is degreased. To do this, use a degreaser such as Aiolube Super Degreaser. After degreasing, lubricate the surface with Aiolube Carbon Assembly Paste and assemble the part.
