## AIR FILTER CLEANER

### Description:

Airolube Air Filter Cleaner is a plant-based formula for cleaning the foam air filter of the motorcycle.

Airolube's natural formula is ready to use and effortlessly removes dirt, such as dust, oil and grease. In addition, the product does not affect the glue used in the filter.

Like the other Airolube products, the Air Filter Cleaner is biodegradable and the packaging is fully recyclable.

### Application:

Cleaning the foam air filter on the motorcycle.

### Instructions:

Completely immerse the contaminated foam air filter in Airolube Air Filter Cleaner. Then let the filter soak for 10 to 15 minutes and then squeeze the filter well until all the dirt is gone (do not wring).

Rinse the filter thoroughly with cold water until no more dirt comes out. Finally, let the filter dry on a clean cloth and only oil the filter when it is completely dry. This treatment can be repeated in case of heavy pollution.
